

ABSTRACT OF THE DISCLOSURE

Disclosed is a shelf assembly which can be mounted as a unit to a desired spot such as a wall with stability, cohesiveness, and design. The shelf assembly includes a shelf support and a shelf body. The shelf support includes a fixing part at least a portion of which is in contact with the desired spot, and a fall prevention part holding the shelf body while preventing it from falling off. The shelf body includes a cavity which can encase the shelf body entirely. Preferable examples include an example in which the fall prevention part has a leaf spring structure, an example in which the fixing part is substantially straight or has a shape resembling the letter "L," and an example in which the desired spot is a corner wall and the shelf support comprises two fixing parts and a fall prevention part arranged between the two fixing parts.
